REASON FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: The claims in the instant application have not been rejected using prior art because no references, or reasonable combinations thereof, could be found which disclose or suggest a surgical instrument comprising a transmission which has two surfaces that are fixed distance apart, where a cam rotates about a central axis, where the central axis is at an angle to a plane extending between the two surfaces, where the cam has a curvilinear body, where the body has a nonuniform thickness, and where the body continuously contacts the two surfaces as the cam rotates about the central axis, such that the two surfaces remain at the substantially fixed distance apart as they move linearly in response to the cam's rotation about the central axis, in combination with the rest of the claimed limitations as set forth in claims 36,44 and 52. As to claim 106, the prior art does not teach the invention including, a transmission configured to convert rotation of the rotary shaft into oscillating linear movement of the blade assembly, where the transmission comprises a torus like shape disposed on the rotary shaft, the torus like shape has a central axis that is angled relative to an axis of the rotary shaft, in combination with the rest of the claimed limitations as set forth in claim 106.
